- **Priority 4:** 1 Business Day

Priority Levels

- **Blocker (Priority 1)** — the problem results in extremely serious interruptions to a production system. It has affected, or could affect, the entire user community. Tasks that should be executed immediately cannot be executed because of a complete crash of the system or interruptions in main functions of the production system. Data integrity is compromised and the service request requires immediate processing as the issue can result in financial losses.
- **Critical (Priority 2)** — the problem results in serious interruptions to normal operations, will negatively impact an enterprise-wide installation or urgent deadlines. In a production system, important tasks cannot be performed, but the error does not impair essential operations. Processing can still continue in a restricted manner and data integrity may be at risk. In a pre-production environment, the problem hinders deployment of an enterprise installation. The service request requires timely processing, because the malfunction could cause serious interruptions to critical processes or negatively impact business.
- **Major (Priority 3)** — the problem causes interruptions in normal operations. It does not prevent operation of a production system, or there could be minor degradation in performance. The error is attributed to malfunctioning or incorrect behaviour of the software. The issue will affect a pilot or proof-of-concept deadline in a development environment.
- **Minor/Trivial (Priority 4)** — the problem results in minimal or no interruptions to normal operations (no business impact). The issue consists of "how to" questions including issues related to Application Program Interfaces and integration, installation and configuration inquiries, enhancement requests or documentation questions.
